ARTICLE TYPE: Review paper

ABSTRACT

The backbone of any developed and developing country is their skilled workforce and youth. To maintain the economic growth any country must focus on the development of their workforce. In the process of development of skills not only the efforts of youth but also the favourable support from the side of government is required. Quality of education with digitalisation can lead skilled workforce in India. In the globalised and competitive environment with knowledge and skills of their people, any country can be at top in the world. The paper discusses about current conditions and challenges of skills development in India. In the development of skilled workforce, educational system and initiatives taken by government are like major pillars for a growing economy. The paper is an attempt to present the ways through which in India skilled workforce can be increased, need and strategies have been observed in this side and digitalisation can be powerful tool and step of Government to develop skills and quality education. The paper highlights that there are many opportunities as well as need of skilled workforce in India also many challenges are there. Therefore, to overcome challenges implementation of strategies, initiatives and step like digitalisation can be milestone in this way.

KEYWORDS: Skill, Workforce, Digitalisation, Development, Need, Strategies and Challenges.
